(a) Isomap of the k = 9 mutual graph, Procrustes-aligned, drawn as the true pixel lattice

(b) topology recovery by graph

(c) members of $S_i(k)$ within 1 (dark) / 2 (light) Chebyshev steps of i; dots: overlap with k nearest

(d) six $S_i(16)$ on the true grid (qd_dev, n = 10000; black = i)
