Monte Carlo, relative error $\varepsilon = 0.1$: $3\ln(2/\delta)/(\varepsilon^2 p)$
Monte Carlo, one-sided $L \geq 0.9p$ (KL)
splitting, budget L, $d \leq 28$ (exact p)
splitting, budget L, $d = 32$--128 (p_{ref})
sequential, stop at $L \geq 0.9\,\hat{p}$
far tail ($L/p_{\text{ref}} < 0.2$; witnesses < 0.5)
